

Advanced Health

Look better, feel better, be better

# What is YOUR body telling you?

**Your body is talking to you....are you listening?**

**Poor memory/concentration?**

**Gas & bloating?**

**Skin problems, bruising?**

**Loss of interest in life?**

**Energy worse than 5 years ago?**

**The first step to getting better is to stop getting worse!** Stop the decay now and take the step to better health. Make your appointment with Dr. Horn to see about discovering what's really going on with your body!

Have you had a truly complete blood chemistry test done? *Have you gotten enough information to look and see what's going on inside your body?* Most people haven't because blood work through insurance won't cover everything in one full swoop!

Health conscious people *want* a better standard of care, so we provide a comprehensive array of over 50 results in 1 profile. Regular testing can help us detect problems early, correct imbalances and help you attain and maintain your optimal health!

Some of the things we look for are early signs of diabetes, thyroid problems, heart disease, iron deficiency or overload, liver and kidney function, inflammation and general immune system to name a few.

It is much easier to deal with problems early...*before* or just as they are starting to occur. Ask Dr. Horn

The panel alone ordered individually is well over \$900.00 without interpretation. To learn more, click here for our "[\*\*Gold Program\*\*](#)". Other blood tests are available through our office at dramatically low prices. There are no insurance companies to deal with and our blood is processed through a national laboratory (Lab Corp).
